

The FCC is rushing into Broadband over Power Lines (BPL) too quickly.

Power lines are unshielded and radiate radio frequency noise that interferes with radio communications.

Several countries have already banned this fatally flawed technology.

Two satellite companies already provide broadband to anyone anywhere in the lower 48. Starband and DirecWay.

And another technology which is rolling out, wireless Internet, is superior to BPL and causes no interference to radio communications services.

So not only is BPL a disaster, it's unnecessary.

Please do what you can to stop BPL.
